IG Index CFD Expiry	CFDs on cash stock indices are undated transactions that do not expire. For each day that a position is open, adjustments are calculated to reflect the effect of interest and, if necessary, dividends.
In-Hours Pricing Methodology	CFDs on indices are quoted with reference to the front month contract in the underlying futures market. Cash CFD prices are adjusted for the fair value between the prices of the cash index and relevant futures contract. The prices quoted for CFDs on futures, which are not on the front month contract, are adjusted for the fair value between that contract and the front month. Prices quoted for CFDs on the front month futures contract are not adjusted.
Out-of-Hours Pricing Methodology	During the out-of-hours sessions on 24 hour index markets, our quotations reflect our own view of the prospects for a market. This could include referring to price movements in other relevant markets which are open and any news flow relevant to that market. Furthermore, business done by other clients may itself affect our quotations. There may be nothing against which to measure our quotation at these times.
Special Information	In order to publish more accurate and reliable prices, IG calculates theoretical fair values for the China 300 and China A50 Indices rather than relying upon underlying market differentials. In general where there are price discrepancies between the cash and futures markets, arbitrageurs return the market closer to its fair value. However, because of trading restrictions in China, these arbitrage trades are often restricted, resulting in wide variances and movements between the underlying market differentials and the theoretical fair values.
Interest Adjustment	<p>A daily interest adjustment is calculated for any position that is opened before 22.00 (London time) and that is still open after 22.00 (London time). These adjustments are posted daily to the client's account. Please note that on Fridays open positions will be adjusted for 3 days funding, covering the weekend.</p> <p>Interest adjustments are calculated as follows:</p> $D = n \times L \times C \times i / 365$ <p>Where:</p> <ul style="list-style-type: none">D = daily interest adjustmentn = number of lotsL = lot sizeC = underlying index price at 10pm (London time)i = applicable annual interest rate

	<p>Note: The formula uses a 365-day divisor for the FTSE® 100 and other GBP, SGD and ZAR denominated markets, and a 360-day divisor for all others. Positions on the China A50 or China 300 cash contract will have funding attributed based on the prevailing CNH (offshore Chinese yuan) interest rate, regardless of the currency of your trade.</p> <p>The applicable annual interest rate is based on prevailing 1-month interbank rates and our funding adjustment of 2.5% per annum for standard contracts and 3% per annum for mini / micro contracts. Interest in respect of long positions is debited from a client's account, and interest in respect of short positions is either credited to or debited from a client's account.</p>
Dividend Adjustment	<p>A dividend adjustment is applied to take account of the ex-dividend adjustment to the index. This is the number of points by which the index price must be adjusted downwards to take account of those shares in the index which go ex-dividend at the close of the cash market. We will use the ex-dividend figure estimated by Bloomberg (E&OE), rounded to the tick size we use for that index, to determine what adjustment to apply. In the case of long positions, the dividend adjustment is credited to the client's account. In the case of short positions, the dividend adjustment is debited from the client's account.</p>
