

Key Information Document – CFD on an Index

Purpose

This document provides you with key information about this investment product. It is not marketing material. The information is required by law to help you understand the nature, risks, costs, potential gains and losses of this product and to help you compare it with other products.

CFDs are provided by **IG Europe GmbH ("IG")**. See www.ig.com or call 0800 409 6789 or +44 207 896 0079 for more information. IG is authorised and regulated by the Bundesanstalt für Finanzdienstleistungsaufsicht ("BaFin") and Deutsche Bundesbank. The BaFin is responsible for supervising IG in relation to this Key Information Document.

This document was created/last updated on 4th August 2026.

You are about to purchase a product that is not simple and may be difficult to understand.

What is this product?

Type

A contract for difference ("CFD") is a leveraged product entered into directly between the investor and IG (a bilateral transaction). It allows investors to speculate on rising or falling prices in an underlying index, without owning the index or its constituents.

Investors have two choices: buy the CFD (take a 'long' position) to benefit from rising index prices, or sell the CFD (take a 'short' position) to benefit from falling index prices.

The price of the CFD is derived from the price of the futures contract on the underlying index. IG uses the futures market as its pricing reference because the index level itself, a capitalisation-weighted average of the prices of the constituents included in the index, cannot be traded directly.

Any profit or loss is the difference between the price when the position is opened and the price when it is closed. If the price moves in the investor's favour, IG pays them this difference; if it moves against them, the investor pays the difference to IG. A long position makes a profit when the index price rises and a loss when it falls; a short position is the reverse.

There are two variants: an undated CFD (cash CFD) has no fixed maturity date and runs for an indefinite term. A futures CFD (forward) references a forward price and has a fixed expiry date; on that date the position is either closed automatically or rolled over into the next period.

Because CFDs are leveraged, the leverage magnifies both potential profits and potential losses.

Term

The cash CFD does not have a pre-defined maturity date and is therefore open-ended; by contrast, a future CFD has a pre-defined expiry date. As a result, there is no recommended holding period for either and it is down to the discretion of each individual investor to determine the most appropriate holding period based on their own individual trading strategy and objectives.

Failure to deposit additional funds in the case of negative price movement may result in the CFD being auto-closed. This will occur when losses exceed the initial margin amount in a given position. In the case of futures CFDs, all transactions will be automatically rolled over into the next period, i.e., from a March expiry into a June expiry, unless the client opt out of this. IG also retains the ability to terminate any CFD where it deems that the terms of the contract have been breached.

Objectives

The objective of the CFD is to allow an investor to gain leveraged exposure to the movement in the value of the underlying index (whether up or down), without actually needing to buy or sell the underlying index. The exposure is leveraged since the CFD only requires a small proportion of the notional value of the contract to be put down upfront as initial margin and is one of the key features of trading CFDs. By way of example, if an investor buys 1 CFD which is equivalent to €1 per point with an initial margin amount of 5% and an underlying index price of 10000, the initial margin will be €500 ($5\% \times 10000 \times €1$). The effect of leverage, in this case 20:1 ($1 / 5\%$) has resulted in a notional value of the contract of €10,000 ($10000 \times €1$). This means that for each 1 point change in the price of the underlying index so the value of the CFD changes by €1. For instance, if the investor is long and the market increases in value, a €1 profit will be made for every 1 point increase in that market. However if the market decreases in value, a €1 loss will be incurred for each point the market decreases in value. Conversely, if an investor holds a short position, a profit is made in line with any decreases in that market, and a loss for any increases in the market.

Intended Retail Investor

CFDs are intended for investors who have knowledge of, or are experienced with, leveraged products. Likely investors will understand how the prices of CFDs are derived, the key concepts of margin and leverage and the fact that losses may exceed deposits in a given position. Indeed, they will understand the risk/reward profile of the product compared to traditional share dealing. Investors will also have appropriate financial means and the ability to bear losses in excess of the initial amount invested in a given position.

What are the risks and what could I get in return?

Risk indicator

The summary risk indicator is a guide to the level of risk of this product compared to other products. It shows how likely it is that the product will lose money because of movements in the markets or because we are not able to pay you.

We have classified this product as 7 out of 7, which is the highest risk class. This rates the potential losses from future performance of the product at a very high level.

It is possible to incur significant losses, up to the total loss of the capital invested. As a retail client, your losses may exceed the margin allocated to the individual position and may extend to the loss of the entire balance available on your account; however, thanks to negative balance protection, your account balance cannot fall below zero, and there is no obligation to make additional payments. For professional clients, this negative balance protection does not apply; their losses may exceed the balance available on the account. Investors may be required to deposit additional funds in order to be able to maintain a position, or to avoid it being closed by IG.

Be aware of currency risk. It is possible to buy or sell CFDs on an index in a currency which is different to the base currency of your account. The final return you may get depends on the exchange rate between the two currencies. This risk is not considered in the indicator shown above.

Market conditions may mean that your CFD trade on an index is closed at a less favourable price, which could significantly impact how much you get back. We may close your open CFD contract if you do not maintain the minimum margin that is required, if you are in debt to the company, or if you contravene market regulations. This process may be automated.

This product does not include any protection from future market performance so you could lose some or all of your investment. If we are not able to pay you what is owed, you could lose your entire investment. However, you may benefit from a consumer protection scheme (see the section "what happens if we are unable to pay you"). The indicator shown above does not consider this protection.

Performance scenarios

What you will get from this product depends on future market performance. Market developments in the future are uncertain and cannot be accurately predicted. The scenarios shown are illustrations based on results from the past and on certain assumptions. Markets could develop very differently in the future.

The following assumptions have been used to create the scenarios in Table 1:

Index CFD (held one day)		
Index opening price:	P	10.000
Trade size (per CFD):	TS	1
Margin rate (%):	M	5%
Margin Requirement (€):	$MR = P \times TS \times M$	€500
Notional value of the trade (€):	$TN = MR / M$	€10.000

Table 1

LONG / SHORT	Percentage return ¹	Profit/loss after costs
Performance scenario		
Minimum	There is no minimum guaranteed return. You could lose some or all of your investment (total loss). You must always keep your account sufficiently funded to ensure that the margin requirements are met. However, as a retail client, you are not subject to any obligation to make additional payments in the event of a debit balance resulting from your trading activity.	
Stress	-1,5%	- 150 EUR
Unfavourable	-0,5%	- 50 EUR
Moderate	1,5%	150 EUR
Favourable	5,0%	500 EUR

¹ The potential return is calculated as a percentage of the notional amount.
External Communication - Disclose with care

The figures shown include all the costs of the product itself. If you have been sold this product by someone else, or have a third party advising you about this product, these figures do not include any cost that you pay to them. The figures do not take into account your personal tax situation, which may also affect how much you get back.

The stress scenario shows what you might get back in extreme market circumstances. The scenarios shown represent possible outcomes calculated based on simulations.

What happens if IG is unable to pay out?

If IG is unable to meet its financial obligations to you, you may have significant losses up to the value of your investment (total loss). However IG segregates all client funds from its own money in accordance with the Securities Trading Act (WpHG). IG also participates in the Securities Trading Companies Compensation Fund (Entschädigungseinrichtung der Wertpapierhandelsunternehmen (EdW), 10865 Berlin/Germany), which covers eligible investments up to 90% of the claim, maximum €20,000 per person, per firm. See <http://www.e-d-w.de>

What are the costs?

The person selling you or advising you about this product may charge you other costs. If so, this person will provide you with information about these costs and how they affect your investment.

The tables show the amounts that are taken from your investment to cover different types of costs. These amounts depend on how much you invest and how long you hold the product. The amounts shown here illustrate an example investment amount and the illustrative holding period shown below, as there is no recommended holding period for this product.

We have assumed:

- You would get back the amount that you invested (0% return).
- €10,000 (notional amount) is assumed.

	If you exit after 5 night
Total costs	5 €
Cost impact	<0,1 %

This illustrates the impact of costs on your return over a holding period of 1 year or less. This percentage cannot be directly compared with the cost impact figures of other PRIIPs.

These figures illustrate the costs in relation to the notional value of the PRIIP.

Trading a CFD on an underlying index incurs the following costs:

This table shows the different types of cost categories and their meaning				
	Cost category	Cost type	Description	Amount on exit after 5 nights (EUR)
Cash and Futures	One-off entry or exit costs	Spread	The difference between the buy price and the sell price is called the spread. This cost is realised each time you open and close a trade.	1 €
		Currency conversion	Any cash, realised profit and losses, adjustments, fees and charges that are denominated in a currency other than the base currency of your account, will be converted to the base currency of your account and a currency conversion fee will be charged to your account.	0 €
Cash only	Ongoing costs	Daily holding cost	A fee is charged to your account for every night that your position is held. This means the longer you hold a position, the more it costs.	4 €
Cash and Futures	Incidental costs	Distributor fee	We may from time to time, after informing you, share a proportion of our spread, commissions and other account fees with other persons including a distributor that may have introduced you.	0 €
Futures only	Other costs	Rollover costs	We charge you to roll over a futures contract into the next month or quarter, equal to half the applicable spread to open and close a trade.	0 €
Total costs				5 €

How long should I hold it and can I take money out early?

CFDs are intended for short term trading, in some cases intraday and are generally not suitable for long term investments. There is no recommended holding period, no cancellation period and therefore no cancellation fees. You can open and close a CFD on an index at any time during market hours.

How can I complain?

If you wish to make a complaint about IG, you should contact our client services team on 0800 409 6789, or email helpdesk.uk@ig.com. If our client services team is unable to resolve the matter you may refer it to our compliance department. If you do not feel that your complaint has been resolved satisfactorily, you are able to refer your complaint to the Bundesanstalt für Finanzdienstleistungsaufsicht (BaFin). See https://www.bafin.de/DE/DieBaFin/Kontakt/Verbraucher/verbraucher_node.html for further information. You can also refer to the European Commission's Online Dispute Resolution Platform, however it is likely that you will be referred to the BaFin.

Other relevant information

If there is a time lag between the time you place your order and the moment it is executed, your order may not be executed at the price you expected. Ensure your internet signal strength is sufficient before trading. The Terms and Policies section of our website contains important information regarding your account. You should ensure that you are familiar with all the terms and policies that apply to your account.
